

A short statement of the candidate – Daniel Mandler

The ISE is the house of the electrochemists and as such, we should try to make it as attractive, comfortable, and useful as possible. The way I see the Vice President's duty is:

- Listen to the members of the ISE and maintain an open dialog with them so that we can best serve the community.
- Try to allocate those areas that either require a change or do not exist in the ISE and stimulate creative discussions.
- Create special “task forces” for studying and implementing new ideas and concepts.
- Strengthen the connections between the ISE and the local electrochemical forums.
- Increase the involvement of the young community of electrochemists.

To achieve these goals, I know that I will have to spend substantial effort and time learning and then implementing changes. This will happen only if I can recruit the ISE members to be more involved. I plan to use the huge potential of the young and more established members of our society who must feel that they have a direct channel to the executive and other committees of the ISE. I believe that this is doable based on my experience as a previous chairman of one of the ISE divisions and the excellent colleagues we have.
